

SOURCE FLUID POWER'S NEW F-20 MOTORIZED FLOW CONTROL—MORE THAN DOUBLE THE FLOW CAPACITY OF OUR LARGEST VALVE

Introducing the next level of Motorized Flow Controls

Source engineers take product improvement seriously. So seriously, in fact, that our new F-20 series Motorized Flow Control (MFC) more than doubles the flow capacity of our largest valve - up to 120 GPM @ 100 PSI differential. This valve is ideal for controlling the output of high flow load sense pumps, or any application requiring remote electric control of high flow rates. Besides all the speeds and configurations available in our present MFC line, the F-20 is available with a new, brush-less motor, allowing millions of cycles of operation, and increasing cycle speed to under a second full open to full closed or vice versa.

Experience for yourself the increased performance capability of the F-20. Call today for more information on this or any of Source Fluid Power's standard or custom engineered products.
